Re: Victoria Bay Stainless Steel Cleaner USDA Certification  
(K01028)

To Whom It May Concern:

As you may be aware, USDA no longer offers a program of product authorization and classification. Chemical manufacturers may now self-certify their products.

This is to certify that this product was developed and is manufactured with consideration for the USDA "Guidelines for Obtaining Authorization of Compounds to be used in Meat and Poultry Plants." This product meets the requirements of 9CFR Section 416.4(c).

This product is safe and effective as a metal cleaner and polish for non-food contact surfaces in establishments operating under the Federal meat, poultry, shell egg grading and egg products inspection programs when used according to label directions. (formerly USDA Classification A7.)

Before using this compound, food products and packaging materials must be removed from the room or carefully protected. This compound must be used in a manner so that all odors are dissipated before food products or packaging materials are re-exposed in the area.

Sincerely,

A handwritten signature in cursive script that reads "Courtney Cosner".

Courtney Cosner
