

# WATER SOLUBLE BAGS

### Benefits of Water Soluble Bags:

- Protect staff from risk of contamination
- Bags dissolve completely in water temperature of 140° F
- Water soluble tie tape attached to bag for easy closure
- Bags can hold wet or damp laundry for hours
- Bags will not damage laundry, equipment or sewer system

### Where are water soluble bags used?

- Hospitals
- Surgery Centers
- Long Term Care Facilities
- Commercial Laundries

Water Soluble Bags are an environmentally-friendly and hygienic solution to minimize contact between staff and contaminated laundry. They are commonly used in healthcare and industrial settings to isolate, transport and clean soiled bed linens, clothing, uniforms, etc. and can help to prevent contact with airborne bacteria, infectious bodily fluids and blood-borne pathogens.

Garments and bedding are placed in the bag, which is then sealed with the attached tie tape. Elkay Water Soluble Bags are puncture-resistant and can be used to hold wet or damp materials for hours without rupturing. The bag and its contents are then placed in an industrial washing machine, where the exceptionally hot water (140° F -- 66° C or above) used in commercial laundry causes the bag and tie tape to dissolve. Because the bag material dissolves completely, it leaves no residue that can harm garments, laundry equipment or waste treatment systems. They are highly resistant to most organic solvents, greases, fats and oils, are impervious to most gases, and will not generate a static charge.

Item	Description	Size	Gauge (mils)	Qty/case
WSB2633	20-25 Gal Hot Water Soluble Bag	26 X 33	0.8	100 (4/25)
WSB2839	30-32 Gal Hot Water Soluble Bag	28 X 39	0.8	100 (4/25)
WSB3639	40-45 Gal Hot Water Soluble Bag	36 X 39	0.8	100 (4/25)
